GS Global Resources works with Forestry Equipment Manufacturer to Optimize Feller Buncher

Helping Timberpro Stay at the Cutting Edge (Case Study)

There was a time, really not that long ago, when a supplier to an equipment manufacturer was just that - the original equipment manufacturer (OEM) ordered components and the supplier or distributor delivered.

Over time, many equipment manufacturers looked to streamline their operations and focus more exclusively on their core competencies. At the same time, many key suppliers became more technically sophisticated, evolving into systems integrators, working closely with the machine manufacturer and assuming a greater share of the technical and engineering work. A good example of how such a relationship can work is TimberPro and GS Global Resources. TimberPro Inc. is a Shawano, Wis.-based manufacturer of forestry equipment such as tracked and wheeled tree harvesters and log forwarders and skidders. With its roots in manufacturing forestry machines going back into the 1980s, TimberPro, first under company founder Pat Crawford - himself a longtime logger - and then his son, Lee Crawford, is a longtime supplier to the forestry industry, successfully carving its niche competing against larger manufacturers, both in the U.S. and globally..

Broderon Manufacturing Corporation Finds Game-Changing Innovation at GS Global Resources

Broderon Mfg. worked together with GS Global Resources to develop an entirely new control system for its crane cabs.

(Case Study)

Broderon RT-400

Broderon Manufacturing Corp. CEO Jeff Bust shares in three words why his team selected GS Global Resources. It's about the "creativity and competence" delivered by GS Global Resources, Bust says. In fact, since the initial decision to engage GS Global for machine control updates to its RT400 rough terrain crane, Broderon has sent additional projects to the electronic controls and hydraulics systems integrator. These include system design, integration and production support for Broderon's new RT500 rough terrain crane.

Leveraging Technology to Set Your Company Ahead

IQAN Training

GS Global Resources offers a two-day training course covering Parker IQANdesign platform, SAE J1939, and CAN-Open communication protocols.

The main philosophy behind the IQAN Creative Studio is that the OEM, with their extensive knowledge of their machine, should be able to write the desired machine functionality directly, without having programming experience.

GSGR IQAN Training

The IQAN software studios cover all phases of the machine life cycle, from development through production to after sales. There are three different studios available; IQAN Creative Studio, IQAN Productive Studio, and IQAN Active Studio.

IQAN Basic 4.0

Registration Page

August 8th & 9th, 2017

November 8th & 9th, 2017

Parker Hannifin Corporation has introduced the latest version of its programming software, IQANdesign 4.0.

- Allows for easy implementation of distributed machine control, diagnostics and user interfaces in a multiple master module environment
- Maintains all previous features of version 3.0 and remains fully backwards compatible, ensuring customers are supported along the migration path
- Features enhanced programming capabilities, improved simulation, extended connectivity and higher run-time performance
- Qcode editor ensures minimal programming skills are required from the user
- Qcode enables user to reduce channel count by using powerful built-in Qcode expressions alongside enhanced flexibility to re-use single channels across the entire application structure
- Automated syntax checking is incorporated into Qcode to clearly indicate code statements that need addressing
- Includes clear and readable functions, syntax highlighting, auto-complete and ability to document functions
- Provides ability to add unlimited informative/instructional PDFs to a project for easy viewing on the IQAN-MD4 display
- Features new engine whereby powerful finite state machines are quickly realized using the new graphical editor, allowing user to pictorially represent functions and monitor progress in real time
- Users can add detailed comments to application logic anywhere, enhancing the ease of understanding complex functions
- Real-time graph displays allow visibility of critical in-cabin process data
