

Metering Pump for Polyurethane Production

Series QXP

- high-accuracy metering with very low pulsations, even at high pressures
- can be used with high and low viscosities and at variable speeds

1 Description

The QXP pumps are the 5th generation of Bucher internal gear pumps, which have proven themselves in thirty years of service around the world. Continuous improvement of its simple and robust design and further development of the manufacturing processes have made the pump lighter in weight and more compact in size without increasing stress to any of the individual parts. A new tooth profile, designed

with the help of CAE offers a significant reduction in noise levels. Large sealing areas result in higher efficiencies. The internal gear ring is supported by a hydrodynamic/ hydrostatic lubricating film, which allows operation at low viscosities or low and high speeds. QXP pumps are therefore suitable for use with variable speed drives, where they can provide variable deliveries.

2 Technical data

General characteristics	Unit	Description, Value
Installation attitude		unrestricted
Mounting method (standard)		oval 2-hole flange to ISO 3019/1 (SAE): QXP 3-6 oval 2-hole flange to ISO 3019/2 (metric) QXP 2+8
Direction of rotation		CW, CCW optional
Pump drive method		flexible shaft coupling magnet coupling (contact Bucher Hydraulics)
Volumetric efficiency rate η_v		approx. 95%
Fluids		Isocyanate Polyole Additive other fluids - contact Bucher Hydraulics

General characteristics	Unit	Description, Value
Viscosity range	mm ² /s (cSt)	10 ... 300* *for values from 3 ... 20'000 contact Bucher Hydraulics
Inlet pressure maximum minimum	bar	4,0 absolute (with PTFE- shaft seal only) 0.5 ... 0.95 absolute (depending on frame size, speed and viscosity)
Running up against pressure	bar	maximum 20 (for higher values contact Bucher Hydraulics)

IMPORTANT: The main characteristics are valid for fluids with 40 mm²/s.

1) Maximum pressure values apply for 20 - 100 mm²/s.

2) Theoretical value at max. permitted continuous pressure for mineral oil.

3) Theoretical value at max. Permitted continuous pressure calculated at 40 mm²/s.

4) Due to manufacturing tolerances, there may be slight variations in the displacement.

5 Note

This catalogue is intended for users with specialist knowledge. The user must check the suitability of the equipment described herein in order to ensure that all of the conditions necessary for the safety and proper functioning of the system are fulfilled. If you have any doubts or questions concerning the use of these pumps, please consult Bucher Hydraulics.

6 Accessories

6.1 Pipe flange - high pressure type for up to 420 bar - SAE JS18 Code 61

3	Retaining screws
4	O-ring

Threaded pipe flanges are spot-faced for DIN 2353 pipe fittings.

Material: ST37

For FPM (viton) seals contact Bucher Hydraulics.
