A Curtiss-Wright Company

JC150 SINGLE AXIS JOYSTICK CONTROLLER

INNOVATION IN MOTION

The JC150 single-axis joystick controller is designed for demanding operator control applications in off-highway vehicles and other man-machine interfaces, where lever strength, signal reliability, and handle functionality are important. The joystick is supplied with a long life conductive plastic potentiometer track and directional/center off or end switches to provide signals for sensing lever direction and fault detection. The JC150's compact size, high lever strength and superb proportional control are ideal for applications which include operator controls on a wide range of off-highway vehicles, including cranes, loaders, excavators, access platforms, tractors and harvesters.

Handles and multifunction grips

The JC150 can be specified with a choice of handles and multifunction grips to increase the functionality of the operator controls. With a choice of push buttons, trigger grips, proportional and switched rockers in a variety of different configurations, users can match their handle selection to suit their unique application. A center or end locking handle is also available to provide a mechanical safety lock – eliminating unwanted movement of the lever.

Innovative design

With a choice of potentiometer tracks that provide the analog signals proportional to lever movement, the JC150 can be configured to provide a range of output signals, directional/center or end switching functions, spring to center or friction hold lever movement and seven different handle styles. The JC150's rectangular profile below the panel allows a number of joysticks to be mounted side by side. All electrical signals terminate in a single AMP 040 multi-lock connector on the base, reducing installation time.

Features

- Potentiometric sensing
- Spring to center or friction hold single axis control
- High strength lever with superb proportional control
 - Locking handle option
 - Sealed above the panel to IP65
 - Choice of outputs and switches
- Choice of handles/grips with or without switches
 - AMP '040' series multi-lock connector

Benefits

- Long life and maintenance-free operation
- Suited to a range of operator control functions
- Rugged and smooth lever movement
- Eliminates unwanted lever movement
- Operation in demanding environments
- Enables user configuration for system safety
- Additional operator control functions
- Simple, error free installation

Certificate No. LRO 0924881

Quality Assurance

Penny+Giles are accredited to BS EN ISO9001:2008. Quality is at the heart of all our systems ensuring the reliability of our products from initial design to final despatch.

EMC Directive 2004/108/EC

The products detailed in this document are supplied as components for installation into an electrical apparatus or system. They are outside the scope of the EEC directive and will not be CE marked.

JC150 SINGLE-AXIS JOYSTICK CONTROLLER

Total reliability

The JC150 includes lever mechanics designed to give smooth proportional control, and has been designed to withstand a load on the handle up to 300N, measured 135mm above the panel. Conductive plastic potentiometer tracks featuring multi-fingered precious metal wipers give low electrical noise and a working life greater than 2 million operations with zero maintenance during this period.

Safety

Designed to interface with an electronic controller, the long-life potentiometer track generates analog outputs with switched reference signals that are proportional to the distance and direction over which the lever is moved. The analog output can be configured to provide signals for fault detection circuits, and a center tap provides an accurate voltage reference for the center position or a zero point for a bipolar supply voltage. The electrically independent directional switch operates with separate contacts each side of the joystick center position, with an option for an end of travel switch. Penny & Giles recommend that the design of the separate machine controller should execute a fault routine if it detects a signal that is outside the specification.

The key advantages of this technology are its linear output and the versatility it derives from its simplicity; it consists of a carbon-based potentiometer track with no complex circuitry or electronics, so it is not susceptible to electromagnetic interference or magnetic fields. However, as a contacting device it does have a long, but finite life and due consideration should be given to applications subject to high intensity use or where high levels of dither or vibration may be encountered.

Custom design

Penny + Giles offer an extensive range of fingertip and hand operated joysticks in standard modular configurations, designed to meet the majority of individual customer needs, but we can customise our designs for OEMs who require something more specialised to their application. Please talk to our technical sales team about your requirements.

Cell manufactured

The modular design of the JC150 joystick is designed to provide the user with a wide choice of options, but allows rapid build and despatch. Contact your nearest sales office for the latest information on availability.

JC150 JOYSTICK CONTROLLER

PERFORMANCE

MECHANICAL

Lever action		Self centering (standard) or friction lock (FL option)
Lever breakout force*	N	4.9 to 10.7 (standard)
	N	13 to 17 to overcome detent - FL option
Lever operating force**	N	16.8 to 21.5 (Standard - full lever deflection)
	N	8 to 12 when out of detent - FL option
Maximum allowable force**	N	300
Lever operating angle	°	± 34
Expected life (operations)		Greater than 2 million (0.5 million for Friction Lock (FL) action or handle options CL and EL)
Weight	g	560 without handle fitted

* Measured at 75mm above upper flange face (80mm for FL option) ** Measured at 135mm above upper flange face

ENVIRONMENTAL

Operating temperature	°C	-20 to +70
Storage temperature	°C	-40 to +85
Environmental protection above the flange		IP65 IEC 60529

ELECTRICAL

Analog Track

Resolution		Virtually infinite
Track resistance (±20%)	kΩ	1.6, 2, 2.9, 5, 10
Track electrical angle	°	± 32
Output voltage range	%	0-100, 10-90, 25-75 of input voltage
Center tap voltage	%	48 - 52 of applied voltage
Center tap angle	°	± 2.5
Supply voltage - maximum	Vdc	35
Wiper circuit impedance	MΩ	1 minimum recommended***
Power dissipation @ 25°C	W	0.25 (no load)
Insulation resistance		Greater than 50MΩ at 500Vdc

***The long life resistive elements require a high impedance load in the wiper circuit to minimise the current flowing through the wiper for optimum life conditions

Switch-

Directional or Center off

Switch operating angle	°	Standard 5 or 7.5 either side of center
------------------------	---	--

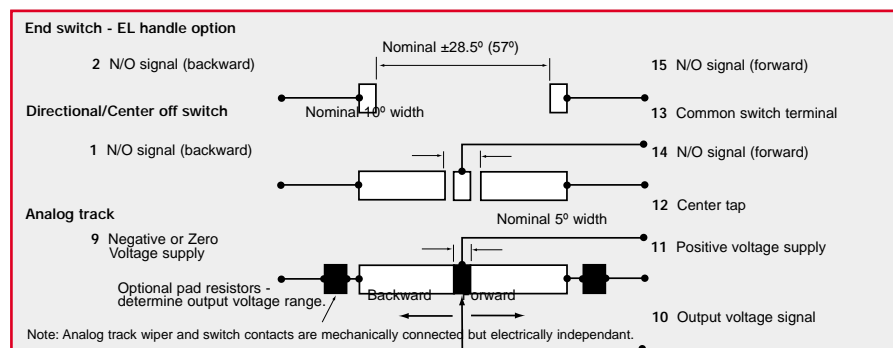

End Switch

Switch operating angle	°	Optional 28.5 either side of center
------------------------	---	--

Supply voltage - maximum	Vdc	35
--------------------------	-----	----

Load current - maximum	mA	10 (resistive)
------------------------	----	----------------

ANALOG TRACK & SWITCH DIAGRAM

JC 150 JOYSTICK CONTROLLER

DIMENSIONS

Note: drawings not to scale

INSTALLATION

The joystick is designed to be fitted from below the mounting panel, through a 42 - 44mm diameter hole. The effectiveness of the joystick flange sealing is dependent on the panel mounting surface being sufficiently rigid to compress the sealing gaiter. The surface finish of the mounting panel is critical to achieving an adequate seal and rough surface finishes, paint chips, deep scratches, etc. should be avoided.

Recommended panel thickness

3.5 to 6mm

Recommended screw torque

M5 fixing screws can be driven to a maximum torque of 3.5Nm when clamped against a 3.5mm thick panel.

The mounting hole depth is 13mm.

The joystick mounting flange should be connected to the vehicle chassis or reference plane (normally zero volts).

ELECTRICAL CONNECTIONS

Mating 16 way connector and pins

Mating 16 way harness

MOUNTING PLATE DETAILS

When the JC150 is selected with the 'A' range handle option, an adaptor plate (P48692) is required to mount the joystick assembly from the top of the panel.

All potentiometer track and directional/center/end switch connections terminate in a single 16-way AMP '040' series multi-lock connector in the joystick base.

SA47931 (AMP 040 16 Way Connector 174046-2; Pins 175062-1 suitable for 20-24 AWG wire size)

P49780 (Connector, Pins and 380mm long cable with 16/0.2mm wires - 20 AWG)

JC150-Y-R-M-HKN-STN

JC150 JOYSTICK CONTROLLER

HANDLE OPTIONS

HKN

The HKN handle is the simplest option available for the JC150. This handle does not include any additional functionality, but is designed to allow the JC150 joystick to be controlled by the operator gripping the handle, palm downwards.

CL/EL

Developed to improve the integrity of your control system, the Center Lock (CL) and End Lock (EL) handles provide a mechanical safety lock – eliminating unwanted movement of the lever. They mechanically hold the shaft of the JC150 in its safe central position or at either end of the JC150's range of travel. Lifting the collar under the base of the handle unlocks the shaft.

HB RANGE

Developed to replicate the functionality of a traditional mechanical handle, the 'HB' range can be supplied with either a momentary action button or rocker switch, mounted into the top of the handle, within easy reach of the operator's thumb. These can be configured as a 'Person Present' feature or, for example, the steer signal for an access platform.

MG RANGE

This option is designed to provide a simple approach to a 'Person Present' handle. The 'MG' range can be supplied with or without an operator's hand rest and can be configured with a combination of momentary action button or rocker switch in the top of the handle, with a trigger switch at the front of the hand grip. The handle profile ensures the operator's fingers are permanently close to the buttons, minimising operator fatigue and maximising functional control. *This handle can also be purchased separately, for fitting to customer levers or assemblies. Ask our sales team for more details on this option.*

A RANGE

This option is designed to meet the demands for more complex control systems in off-highway applications. The 'A' range of ergonomic multifunction hand grips can be fitted with a combination of analog outputs, push button and 'Person Present' switches. The handle can be supplied with two independent analog outputs generated by proportional rockers which, in turn, provide auxiliary directional switching in addition to the potentiometric output. When coupled with the JC150 joystick, this unit can provide a three-axis control device.

This handle can also be purchased separately, for fitting to customer levers or assemblies. Ask our sales team for more details on this option.

W RANGE

This option provides an alternative approach to a 'Person Present' handle whilst offering the flexibility of multiple switches in the top of the handle. The 'W' range can be supplied with (WT) or without (WN) the 'Person Present' trigger switch as well as up to four switches in the handle top. These can be specified to be in any of the four 'on axis' positions.
